

Payment Gateway Integration (FPX)

It is our wish to provide solution to e – commerce website. Encountering this, we have been approach by a company, which require the team to provide integration of a newly introduced payment gateway offered locally in Malaysia, FPX. Knowing the exposure received, we have agreed to provide the integration solution.

Rather integrating the norm Pay pal and world pay, it has been an exciting exposure to this rather new payment gateway. Applying the name of Financial Process Exchange, we have grabbed a few new payment concepts behind this approach. This include on how to integrate, security issue and how payment would filter through to smoothen a transaction.

Tracing back this payment gateway, FPX, it is a newly developed inter-bank payment gateway with support of the local MEPS (Malaysia Electronic Payment Solution) body. The concept is new and has been regarded as the new dawn of electronic payment in the country and may as well be developed into regional trusted sole solution.

With the list of requirement and API integration tool set, we drive our way. Encountering a few failures due to some restriction and new exposure to such a stringent gateway, we manage to get it in hand during the near end-date of application submission. Thanks to assistance provided by the peer banking IT team, we have resolved the problem with experience gained.

It would be another chapter on which this new technology will soon dominate the local electronic transaction. We are glad that we are sitting in the front bench to be exposed at this stage. For those who would like to seek more information on this, get yourself google – lized with the keyword FPX, or Financial Process Exchange or visit this URL; www.meps.com.my
